DETAILED ACTION

Allowable Subject Matter

1. Claims 4-6 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art of record fail to teach or suggest alone or in combination, a control circuit including the following limitations: "a protection circuit for preventing the half bridge oscillation circuit of the electronic ballast from generating an abnormal high AC voltage when the fluorescent lamp is defective, the protection circuit including a capacitor C11 having a first end connected to the output terminal P8 and a second end connected to an anode of a diode D12 and a resistor R8 which is connected to the ground, a resistor R9 having a first end connected to a cathode of the diode D12 and a second end connected to a cathode of a Zener diode D13, a capacitor C12 in parallel with a resistor R10 connecting the cathode of the Zener diode D13 to the ground, a capacitor C13 connecting an anode of the Zener diode D13 to the ground, a SCR thyristor TH1 having a gate connected to the anode of the Zener diode D13, a cathode connected to the ground and an anode connected to a junction between the resistor R1 and the resistor R5 and a diode D11 having an anode connected to the output terminal P3 and a cathode connected to the anode of the SCR thyristor TH1; and an automatic re-lamp circuit for lighting a newly-installed fluorescent lamp without switching off and on a supplying power of the control circuit" as claimed in claim 4. It is for these reasons in combination with all the other limitations in the independent claim 4, that claims 4-6 are allowable over prior art of record.
